Fund Standard Deviation	0.30	1.56	-	1.25
Benchmark Standard Deviation	0.54	1.08	-	2.34

Remark : \* % p.a.

### Risk Level

Mainly invest in government bonds and fixed income instruments, having policy to invest in non-investment grade / unrated not more than 20% of the NAV, in average, in any accounting year.

### Fund Information

Registered Date	30 March 2016
Share Class Launch Date	There is no class division.
Dividend Policy	No dividend
Fund Duration	Indefinite

### Fund Manager

Ms. Vannachan Ungthavorn	Since 30 March 2016
Ms.Chanisda Viranuvatti	Since 30 March 2016

### Benchmark

1. US Generic Government 6 Month Yield plus Credit Spread of securities rated A, adjusted by the exchange rate hedging cost converted in THB (50%)
2. The average of 1-year fixed deposit rate 5 million Baht of individual by BBL, KBANK, SCB after TAX (30%)
3. Total Return of ThaiBMA Commercial Paper Index (AA- up) (10%)
4. Total Return of ThaiBMA Short-term Government Bond Index (10%)

### Remark:

- The Management Company uses such index as a benchmark for fund performance comparison.

### Warning:

- Investment in Mutual Fund is not bank deposit.
- Past performance is not indicative of future results.

### Prospectus

Investors should study  
Liquidity Risk Management  
Tools in the prospectus.

Subscription

Subscription date : Every business day  
 Business hours : 08:30 a.m. - 03:30 p.m.  
 Min. initial subscription : Indefinite  
 Min. subsequent subscription : Indefinite

Redemption

Redemption date : Every business day  
 Business hours : 08:30 a.m. - 03:00 p.m.  
 Min. redemption : Indefinite  
 Min. account balance : Indefinite  
 Settlement period : T+1 is 1 working day  
 from redemption order date

Remark:

Settlement Period: Business holidays abroad are not included.

Definition

Maximum Drawdown : The percentage of the fund's maximum loss in the past 5 years (or since the fund's inception if it is launched for less than 5 years) which is measured from the highest NAV per unit to the lowest NAV per unit during such period. Maximum Drawdown is an indicator of the risk of loss from investing in the fund.

Recovering Period : The length of time that the fund takes in recovering from the point of maximum loss to earning back the initial investment.

FX Hedging : The percentage of foreign currency investment with FX hedging.

Portfolio Turnover Ratio : The frequency of securities trading in the fund portfolio over a certain period, calculated by taking the lower value between the sum of the value of securities purchased and the sum of the value of securities sold of the fund in 1 year period divided by the average NAV in the same period. A fund with high Portfolio Turnover Ratio indicates frequent securities trading by fund manager resulting in high trading costs. Therefore, it is necessary to compare with the performance of the fund in order to assess the worthiness of such securities trading.

Sharpe Ratio : A ratio between the excess return of a fund and the risk of investment. The Sharpe ratio reveals the average investment return, minus the risk-free rate of return, divided by the standard deviation of returns for the fund. The Sharpe ratio reflects the extra return that should be received by the fund to compensate the amount of risk taken in investment. The fund with a higher Sharpe ratio is considered superior to other funds in terms of management efficiency since it provides higher excess return under the same risk level.

Alpha : The excess return of a fund relative to the return of a benchmark index. A fund with high alpha indicates that it is able to beat the performance of its corresponding benchmark which is a result of the capabilities of the fund manager in selecting appropriate securities for investment or making investment in a timely manner.

Beta : A measure of the degree and direction of volatility of the rate of return of assets in the investment portfolio of the fund compared to the changes in the overall market. A beta of less than 1.0 implies that the rate of return of the fund's assets is less volatile than that of the securities in the broader market whereas a beta of greater than 1.0 implies that the rate of return of the fund's assets is more volatile than that of the broader market.

Tracking Error : The efficiency of the fund to imitate its return to benchmark. Low Tracking Error means the fund is effective in generating return close to benchmark. High Tracking Error means the fund generates return more deviate from benchmark.

Yield to Maturity : The rate of return earned on a bond held to maturity, calculated from the interest expected to receive in the future over that bond duration and paid back principal discounted to the present value. It is used to measure return of fixed income funds by calculating the weighted average of Yield to Maturity of each bond that the fund invests. As Yield to Maturity has standard unit in percentage per annum, it can be used to compare the returns between fixed income funds that have an investment policy of holding bonds until maturity and similar investment characteristics.
