## **Message from the Company**

## To Unitholders

## **Market Summary**

Central banks of major economies continued to raise interest rates in the first half of 2023 to control inflation towards target. The global economy slowed down, especially in the manufacturing sector, while the service sector continued to grow. Later, inflation began to turn into a downward trend due to a more balanced supply and demand in both the energy and labor markets. As a result, central banks stopped raising interest rates. In addition, weak job data and continued lower inflation rate in the last quarter caused consensus to expect multiple rate cuts in 2024 which led to market rally. In 2024, economic activities can continue to expand. As a result, the labor market and inflation dropped less than expected. This increases the chance that interest rates will be cut at a slower pace. However, global equity continued to rally in Q1, led by the developed markets which are driven by earning expectations and Chinese stock market which had sign of recovery after various monetary and fiscal policy measures were taken to stimulate the economy and gain confidence from investors.
