Definition

Maximum Drawdown : The percentage of the fund's maximum loss in the past 5 years (or since the fund's inception if it is launched for less than 5 years) which is measured from the highest NAV per unit to the lowest NAV per unit during such period. Maximum Drawdown is an indicator of the risk of loss from investing in the fund.

Recovering Period : The length of time that the fund takes in recovering from the point of maximum loss to earning back the initial investment.

FX Hedging : The percentage of foreign currency investment with FX hedging.

Portfolio Turnover Ratio : The frequency of securities trading in the fund portfolio over a certain period, calculated by taking the lower value between the sum of the value of securities purchased and the sum of the value of securities sold of the fund in 1 year period divided by the average NAV in the same period. A fund with high Portfolio Turnover Ratio indicates frequent securities trading by fund manager resulting in high trading costs. Therefore, it is necessary to compare with the performance of the fund in order to assess the worthiness of such securities trading.

Sharpe Ratio : A ratio between the excess return of a fund and the risk of investment. The Sharpe ratio reveals the average investment return, minus the risk-free rate of return, divided by the standard deviation of returns for the fund. The Sharpe ratio reflects the extra return that should be received by the fund to compensate the amount of risk taken in investment. The fund with a higher Sharpe ratio is considered superior to other funds in terms of management efficiency since it provides higher excess return under the same risk level.

Alpha : The excess return of a fund relative to the return of a benchmark index. A fund with high alpha indicates that it is able to beat the performance of its corresponding benchmark which is a result of the capabilities of the fund manager in selecting appropriate securities for investment or making investment in a timely manner.

Beta : A measure of the degree and direction of volatility of the rate of return of assets in the investment portfolio of the fund compared to the changes in the overall market. A beta of less than 1.0 implies that the rate of return of the fund's assets is less volatile than that of the securities in the broader market whereas a beta of greater than 1.0 implies that the rate of return of the fund's assets is more volatile than that of the broader market.

Tracking Error : The efficiency of the fund to imitate its return to benchmark. Low Tracking Error means the fund is effective in generating return close to benchmark. High Tracking Error means the fund generates return more deviate from benchmark.

Yield to Maturity : The rate of return earned on a bond held to maturity, calculated from the interest expected to receive in the future over that bond duration and paid back principal discounted to the present value. It is used to measure return of fixed income funds by calculating the weighted average of Yield to Maturity of each bond that the fund invests. As Yield to Maturity has standard unit in percentage per annum, it can be used to compare the returns between fixed income funds that have an investment policy of holding bonds until maturity and similar investment characteristics.

BGF Global Allocation Fund
A2 U.S. Dollar
BlackRock Global Funds

September 2025

Unless otherwise stated, Performance, Portfolio Breakdowns and Net Asset information as at: 30-Sep-2025.

INVESTMENT OBJECTIVE

The Global Allocation Fund seeks to maximise total return. The Fund invests globally in equity, debt and short term securities, of both corporate and governmental issuers, with no prescribed limits. In normal market conditions the Fund will invest at least 70% of its total assets in the securities of corporate and governmental issuers. The Fund generally will seek to invest in securities that are, in the opinion of the Investment Adviser, undervalued. The Fund may also invest in the equity securities of small and emerging growth companies. The Fund may also invest a portion of its debt portfolio in high yield fixed income transferable securities. Currency exposure is flexibly managed.

BlackRock Global Funds

Average Market Cap: The average market capitalization of a fund's equity portfolio gives you a measure of the size of the companies in which the fund invests. Market capitalization is calculated by multiplying the number of a company's shares outstanding by its price per share.

Effective Duration: Effective duration is a measure of a fund's interest-rate sensitivity. Put simply, the longer a fund's duration, the more sensitive the fund is to shifts in interest rates. So a fund with a duration of 10 years is twice as volatile as a fund with a five-year duration.

IMPORTANT INFORMATION:

Unless otherwise specified, all information as of 16-Oct-2025.

This advertisement or publication has not been reviewed by the Monetary Authority of Singapore. For distributing share classes, dividends are not guaranteed and may be paid out of capital. Dividend data may not be available on the issue date of this factsheet. Details on distribution may be available on request. Payments on dividends result in a reduction of the NAV per share of the Fund on the ex-dividend date. Actual dividend payout will be subject to the manager's discretion. Fund performance is shown on a NAV to NAV basis on the assumption that all distributions are reinvested, taking into account all charges which would have been payable upon such reinvestment. The Fund may use or invest in financial derivatives. In Singapore, this material is issued by BlackRock (Singapore) Limited (company registration number: 200010143N). This material is for informational purposes only and does not constitute an offer or solicitation to purchase or sell units in the Fund. Sources: BlackRock and Morningstar. Investment involves risk. Past performance is not necessarily a guide to future performance or returns. The value of investments and the income from them can fluctuate and is not guaranteed. Rates of exchange may cause the value of investments to go up or down. Investors may not get back the amount they invest. Individual stock price/figure does not represent the return of the Fund. BlackRock Global Funds (BGF) is an open-ended investment company established in Luxembourg which is available for sale in certain jurisdictions only. BGF is not available for sale in the U.S. or to U.S. persons. Product information concerning BGF should not be published in the U.S. BGF has appointed BlackRock (Singapore) Limited as its Singapore representative and agent for service of process.

Subscriptions in BGF are valid only if made on the basis of the current Prospectus and the Product Highlights Sheet available on our website www.blackrock.com/sg and you must read these documents before you invest. Investors may wish to seek advice from a financial adviser before purchasing units of the Fund. In the event that you choose not to seek advice from a financial adviser, you should consider carefully whether the Fund in question is suitable for you. Any past payout yields and payments are not indicative of future payout yields and payments. Distributions (if any) is not guaranteed and might be changed at the discretion of the Directors or Manager. Distribution may be declared out of income and/or capital of the Fund, in accordance with the prospectus. Such distributions may result in an immediate reduction of the net asset value per unit in the Fund. Some funds may generate a material portion of their payout income from financial derivatives. This may expose the funds to a higher degree of risk. These risks are described in the funds' prospectuses.
